

TRACK MASTER

Integrated solution to identify and track!

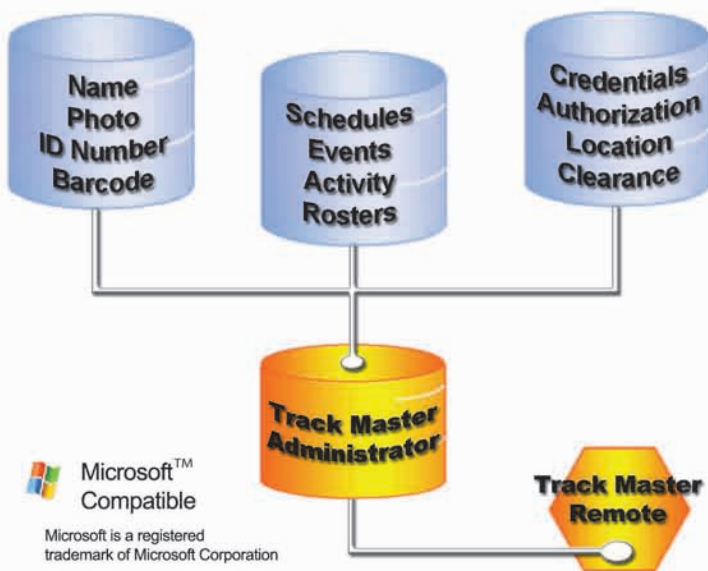

INTRODUCTION:

Track Master is a powerful software product which runs in conjunction with a Personal Digital Assistant (PDA), specifically designed to **track an individual's credentials or authorization at locations, events or activities**. This personnel management solution allows tracking of individuals linked to a database associated with Photo ID Cards.

Track Master's flexible design elements allows the users to configure photo ID card holders information and download this information to a PDA enabling the user to track individuals remotely.

Multiple Databases

Track Master Administrator

Track Master Administrator is a flexible database management tool which allows the user to configure a multitude of criteria's for tracking individuals. The Track Master Administrator is unique in its ability to connect to multiple databases enabling variable data to be tracked remotely. As an example; one day your PDA could be configured to monitor students taking a field trip, who got on the bus or who is missing. The next day the PDA could be configured to track student's class attendance. The tracking possibilities are endless as you configure the Track Master Administrator to meet your needs. Whether your application is in Education, Transportation, Emergency Response, Business, Government or other Industries Track Master is configurable to your application needs.

Track Master Remote

Track Master Remote receives downloaded information from the Track Master Administrator module providing virtually instant access to downloaded data. The Track Master Remote software running on a PDA with a Barcode scanner gives you the power and flexibility to instantly track individuals' information by the simple scan of a barcode. Data such as; Event, Activities, Check in/out, ID number and Name are conveniently displayed in full color. Checking authorization for Locations, Credentials, Certificates, Events or Activities are checked and clearly displayed in a go/no-go window which changes colors. From the PDA screen you have the ability to lookup additional information if required. Track Master Remote is quick so you are not wasting time in making decisions or tracking individuals, reducing security and safety risks.

Tracking Solutions For Real-World Applications

Combine your photo ID data with the power of a handheld device and you have mobile tracking.

FEATURES

- Database Connectivity:** Seamlessly connects to LexID Pro, LE and/or LexID VMS.
